## **DETAILED ACTION**

### ***Response to Arguments***

1. Applicant's arguments, see response, filed 07/13/05, with respect to Claims 1-21 have been fully considered and are persuasive. The rejection of Claims 1-21 has been withdrawn.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-8,12-14,17,19-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Christie, Jr. et al (US 4,003,660).

For claim 1, which is representative of claims 5,12,17, and 19, Christie, Jr. teaches a system for color measurement for a color hard copy apparatus, having a print media transport path, comprising: an illumination source adjacent to said path; a plurality of photodetectors adjacent to said path; and test strips each of a single color formed on a sheet of media traveling said path, each strip having a geometric configuration such that each of said photodetectors detects substantially discrete regions of that strip (Col 5 Lines 20-24,31-33,59-60,64-68; Fig 1).

For claim 2, which is representative of claim 6, Christie, Jr. teaches said photodetectors having predetermined spectral responses (Col 6 Lines 26-29).

For claim 3, which is representative of claim 7, Christie, Jr. teaches wherein the illumination source is broadband (Col 5 Lines 51-59).

For claim 4, which is representative of claim 8, Christie, Jr. teaches a white calibration target mounted within the field of view of all of said sensors (Col 5 Lines 26-31).

For claim 13, Christie, Jr. discloses an illumination source positioned to project incident light to illuminate each test strip as that test strip passes within view of the sensor array (Col 5 Lines 51-59; Fig 1).

For claim 14, which is representative of claim 20, Christie, Jr. teaches wherein each sensor comprises a photodetector operable to measure a spectral characteristic of each test strip as the test strip passes within view of the sensor array is a photo (Col 6 Lines 26-37).

### ***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 9-11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Christie, Jr et al (US 4,003,660) in view of Hubble, III et al (US 6,384,918).

Christie, Jr discloses the method as discussed above.

Christie, Jr does not disclose expressly storing data representative of color characteristics.

Hubble discloses storing data representative of color characteristics (Col 13 Lines 49-57).

Christie, Jr and Hubble, III are combinable because they are from the same field of endeavor.

At the time of the invention, it would have been obvious to a person of ordinary skill in the art to combine Hubble with Christie, Jr.

The suggestion/motivation for doing so would have been to store data.

Therefore, it would have been obvious to combine Christie, Jr with Hubble to obtain the invention as specified in claim 9.

For claim 10, Hubble teaches comprising the steps of printing a plurality of intended colors in addition to said first color with said device, and repeating steps a)-c) for each of the plurality of intended colors than said first color (Col 4 Lines 45-57).

For claim 11, Hubble teaches comprising the further steps of: prior to steps a)-c), calibrating each of said sensors using a white calibration target (Col 18 Lines 23-27).

### ***Allowable Subject Matter***

6. Claims 15-16,18,21 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
